

## Quantitative Research

Come up with a research question about school, with a yes/no answer, and ask 25 people. Create a bar chart to illustrate your data.

E.g. On a whole, did you enjoy your high school experience when you were a student?

Yes: 19 No: 6

Make some comments about your findings including gender differences or other interesting details.

Remember that the question will be part of your overall research so ask a question that will support your overall thesis.
