

## Lab exam

- 1- Name of lab (density, electricity, acids & bases)
- 2- Purpose of lab
- 3- Hypothesis
- 4- Equipment
- 5- Materials
- 6- Procedure
- 7- Results
- 8- Observations
- 9- Conclusions
- 10- Notes

# Hypothesis

What you think will happen and **why**

# Procedures

Step by step (usually about 10 steps)

# Equipment

Object used to test the material (scale, ruler, beaker ...)

# Material

Object being tested

# Results

Electricity – created a circuit or not

Acid and bases – is the liquid an acid or base

Density – Table (mass/volume = density)

# Observations

Things that you notice that are not part of the experiment

# Conclusion(s)

A reflection on your hypothesis

# Notes

Reminders, thoughts, what you have learned, . . .

## Density Lab

**Purpose:** The purpose of this lab is . . .

**Hypothesis:** My hypothesis is . . . because . . .

**Equipment:**  
Beaker  
Strainer  
Scale  
Ruler  
...
